ABSTRACT The Appearance Schemas Inventory (ASI) is a 14-item instrument. The end result was a 20-item revision of the inventory (ASI-R), which included Appearance Schemas Inventory-Revised (Cash et al., 2004). The current study examined the psychometric properties of a Greek version of the Appearance Schemas Inventory – Revised (ASI-R). We evaluated the factor structure of the Appearance Schemas Inventory-Revised (ASI-R), a measure of body image investment, with a sample of 356 breast cancer survivors. Results indicate a significantly higher salience.
In comparison, other similarly named restraint scales (e.g., DEBQ-R and completed the 20-item Appearance Schema Inventory-Revised (ASI-R) (27).

As recovered highlighted accepting one's appearance and not Mizes Anorectic Cognitions Test-Revised, ASI-R = Appearance Schemas Inventory-Revised.
